

DT Projects 2023-24

Year 3 – Spring Term

Making It Move

As part of this project **Year 3** learnt that different mechanical systems can be used to make an object move. The parts of a machine that create movement are called mechanisms. Mechanisms include sliders, levers, linkages, wheels, axles and cams.

Year 3 used their learning to create an 'erupting volcano'. They used cams to make the movement needed to get the volcano to 'erupt'.
